

Messenger® USB

Nel-Tech Labs Digital Messaging System

Message-On-Hold • Background Music Source

The **Messenger® USB** is a state-of-the-art digital audio playback device designed to provide a continuous-play audio source for message-on-hold, background music, or any other audio application where high-quality audio playback is required.

Messages are stored on industry standard USB flash drives from 16MB up to 4GB. The Messenger USB is capable of MP3 file playback from 8Kbps all the way up to full CD-quality audio playback of 128Kbps.

Audio content is easily managed by plugging the USB flash drive into a PC or MAC computer's USB port and "dragging and dropping" MP3 files to and from the drive. Your customers can receive new and updated message-on-hold or background music programs via e-mail or ftp and update the units themselves saving you the expense of additional USB flash drives and the related mailing and tracking costs.

The Messenger USB is also available with the next generation encryption software called Sonocrypt Level 3. This version of Sonocrypt

encrypts the file itself making the MP3 file unplayable anywhere except on the Messenger USB. This makes the distribution of music and messaging safe, secure, and ensures against unauthorized playback.

The Messenger USB features include:

- Plays MP3 files from USB Flash Drive
